

Instructions for New Mould Set-Up

When making a mould for a new profile, it is required to send a minimum of 13' (feet) of your desired profile to Resinart. Please supply a clean, straight run of the profile without knots. Any flaw in your wood will transfer onto the mould, and will also be present on the finished product.

If stain grade flex is required, the wood must be shipped in one piece via motor freight. If the flex product is being painted, it can be cut in two and shipped via UPS. When shipping, we recommend that precautions are taken to protect your profile from breakage or damage (bubble-wrap, tube-packs, stretch wrap etc).

Send wood to: ResinArt East Inc.
201 Old Airport Rd.
Fletcher, NC 28732

Feel free to call if you have any questions.
