Ordering Pre-Formed Radius Casing

Radius Trim is pre-formed at the factory. DuraFlex is typically used in the radius area with matching wood casing used on the straight runs. We can also furnish straight runs if necessary.

Please provide the inside radius or the inside diameter when ordering trim for a true half circle.

For an Arch (or Eyebrow), provide the width and the rise in the center of the curved portion.

Elliptical curves require a template. The template may be drawn on paper or cardboard. **WOOD TEMPLATES ARE NOT NECESSARY.**
